

ADA Accessibility

When your project requires ADA accessibility, BEI together with its suppliers can find a solution which is right for you and the project.

Automated window treatments controlled by a wall switch or remote control are always the safest and easiest options for occupants with disabilities.

If your project requires ADA accessibility, BEI's experienced staff can provide their expertise.

ADA Stds. 8.2.2(5); 4.27.4

Easy to operate controls that do not require tight grasping, pinching, or twisting of the wrist.

ADA Stds. 9.2.2(5); 4.27.3

Window shade controls easily placed within 54" of the floor for side approach or 48" of the floor for forward approach.

28 CFR 36.304(b)(4)

Approachable and easily controlled window treatments for guests who use wheelchairs, crutches, and other mobility aids.

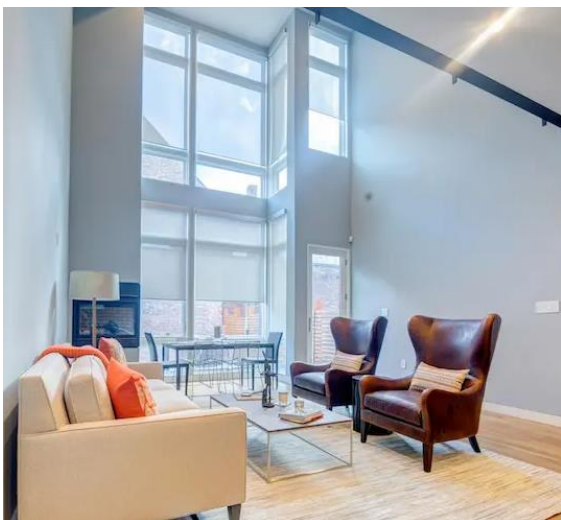

Contact BEI for more information and solutions for your ADA window covering needs.

App Control & Out-of-Reach Shades

Many of BEI's motorized products are "APP compatible" allowing you to operate your window treatments remotely while you are away or simply on a schedule which you select or create.

Solar Shades are designed to maximize natural light and improve energy efficiency all while protecting the interiors of your environment. When windows are out-of-reach, app compatible shades are a necessity.

Daylighting is controlling access of natural and direct light coming into a building. This reduces the use of electric light, thereby decreasing energy costs. Daylighting diminishes the need for artificial lighting and creates a positive work environment for uplifting spirits and productivity. Exposure to natural daylight inside a building, results in improved mood and comfort and, more importantly, decreased stress and rates of depression.

However, too much unmanaged natural and direct sunlight can cause glares and hot spots. BEI can help you manage these drawbacks by providing high quality, environmentally friendly, manual, or motorized solar shades.

Solar Shades are designed to maximize natural light and improve energy efficiency all while protecting the interiors of your environment. When windows are out-of-reach, app compatible motorized solar shades are a powerful addition to any building!

Contact BEI for more information and solutions for your Daylighting Designs.
